

CENG311 – RESPONSIVE WEB DESIGN

PROJECT SUMMARY

Mertcan Köse 18050111061

Eray Ergüleç 18050111018

Our application is a website that promotes a student community. Our goal is to ensure that students at the school are enrolled in the community. For this purpose, to convey our events to them in the most striking and beautiful way. Also to encourage them to write on the website with our blog posts. Students can easily contact us by using contact page. There are 4 different links on our homepage on our site. These links are blog, events, about us and contact sections. The blog section is the section where students can share their own blogs. Events section is the section where announcements and news will be published. The About us section is the section that contains information about our purpose and us.

There are homepage, navbar and 4 different pages on our website.

In order to make it easier to contact students, we have put a whatsapp plugin in the lower right corner.

We made it more fluid and expressive by showing the events on the Event page with the help of slider plugins. Also we also put a small timer plugin on the Event page that counts down to the start time of the event.

We have made our goal as a board of directors more visible by putting a progress bar on the About page that determines the membership target.

Also we used JQuery autocomplete and required input styles to define properly contact requirements.

---I think the website is quite useful for students who want to get to know the community and get in touch. In addition, we keep the student more on the website with blog posts and ensure that he/she gains sympathy towards the community.

We expect the community to gain more members in the future. So we can reach our goal earlier.

We have shown the members of the board of directors more effectively by requesting an internal ajax request in the 'about' section. Also we make external ajax request to simulate other community people.

Thanks.
